Pharmacologic Management of Chronic Pain Chronic pain is a multifactorial condition with both physical and psychological symptoms, and it affects around 20% of the population in the developed world. In spite of outstanding advances in pain management over the past decades, chronic pain remains a significant problem. Pharmacology in Pain Management Physioplus A wide range of medications are used to manage pain resulting from inflammation in response to tissue damage, nociceptive- and neuropathic pain. It is important to understand the limitations of the pharmacological management of pain and the importance of combining pharmacological approaches with non-pharmacological and self-management strategies.
